# Acknowledgements

---

I would like to take the opportunity to thank my supervisor Professor Alison Ferguson for her enthusiasm and guidance. Her insightful comments have always challenged and motivated me and have greatly enhanced the quality of my work.

I would also like to thank my family, particularly my parents, Richard and Brenda Proudfoot for their ongoing support and encouragement. Dad, I particularly want to thank you for all the time and effort you have devoted to helping me edit and format this thesis.

<b>Abstract.....</b>	<b>1</b>
<b>Chapter 1:        Learning, Expertise and Clinical Education .....</b>	<b>2</b>
1.1    Introduction	2
1.2    Theories of Learning	4
1.2.1    Theories of Learning Emphasising the Individual	5
1.2.2    Theories of Learning Emphasising Socialisation	8
1.2.3    Contributions of Theories of Learning	11
1.3    Theories of Expertise	13
1.3.1    Models of Expertise in the Classroom	14
1.3.2    Intelligence, Abilities and Expertise	15
1.3.3    Cognitive Task Analysis and Theories of Expertise	17
1.3.4    Collaboration, Problem-solving and Theories of Expertise	18
1.3.5    Expertise Development in Health Professionals	19
1.3.6    Contributions of Theories of Expertise	21
1.4    Theories of Practice	22
1.4.1    Professional Practice and Clinical Education	23
1.4.2    Becoming a Professional	24
1.4.3    Knowledge	26
1.4.4    Reflection	29
1.4.5    Professional Practice and Artistry	32
1.5    Implications for Educators	33
1.6    Reconciling the Approaches	35
1.7    Summary	38
<b>Chapter 2:        An Integrated Framework for Clinical Education.....</b>	<b>40</b>
2.1    A Constructivist Perspective	41
2.1.1    The Individual	41
2.1.2    The Community	45
2.2    A Sociocultural Perspective	46
2.2.1    The Community	46
2.2.2    The Individual	49
2.3    An Integrated Framework	50
2.4    Context as the Mediator for Learning	55
2.5    Learning and Transfer	60
2.5.1    Learning and Retrieval as a Process of Transfer	61
2.5.2    Traditional Views of Transfer	63
2.5.3    Transfer as Preparation for Further Learning	64
2.5.4    Transfer and Sociocultural Perspectives on Learning	66

2.6	Educational Implications of an Integrated Approach	70
2.6.1	The Continuum of Authenticity and Instructional Design	71
2.6.2	Challenges to Implementing Authentic Learning Experiences	78
2.6.3	Developing Optimal Learning Environments	81
2.7	Summary	86
<b>Chapter 3:</b>	<b>Authentic Learning.....</b>	<b>89</b>
3.1	Why Examine Authenticity?	89
3.2	Defining Authentic Learning and Assessment	90
3.3	Frameworks of Authenticity	91
3.3.1	Authenticity Frameworks for Curriculum Design	91
3.3.2	A Five Dimensional Authentic Assessment Framework	93

## Abstract

---

In a departure from traditional approaches to learning which often heighten the divide between theory and practice, this thesis proposes that the core aim of health science courses is to foster the emerging development of professional artistry to a level of competency sufficient for students to enter the workforce. The development of professional artistry is a complex, multifaceted process which requires the integration of theoretical knowledge in practice, development of a professional identity and recognition of the influence that past experience, both personal and professional, has on each student's learning and understanding of practice. Recognising the development of professional artistry as the core educational goal requires a reassessment of how best to facilitate learning. Implicit in adopting this view of learning is the recognition that the authenticity of learning contexts is essential for ensuring that theoretical knowledge is sufficiently integrated with clinical practice. The context of learning must also situate theoretical knowledge into authentic clinical scenarios in a manner that encourages role taking to foster the development of professional identity. In this thesis an educational framework is proposed that describes both individual and social processes of learning and how they combine to facilitate the development of professional artistry. The challenge of how to situate learning in authentic contexts outside of clinical placements is discussed through the development of an online learning module based on an integration of principles of authentic learning, situated learning and instructional design. The importance of learning in authentic contexts was explored by examining the influence of context on the performance of 44 psychology students and 43 speech pathology students when they independently completed the online learning module. Results indicated that exposure to the online learning module resulted in a significant improvement in test performance for speech pathology students but no significant difference in performance for psychology students. The role of collaborative learning in facilitating the development of professional artistry was also explored by examining interactions between a second-year, third-year and fourth-year student when paired with a clinical educator to complete the online learning module. Research revealed important insights into the role of socialisation and interaction in the development of professional artistry and how this process evolves as student experience increases. Future research directions and implications for education are discussed.
